Analog Way's LiveCore™ series now easily compatible with Crestron 2-series and 3-series Control Systems

October 2013 – Analog Way is pleased to announce that all models of the LiveCore™ series, its range of Premium AV Switchers, can now be controlled by 2-series and 3-series Control Systems from Crestron Electronics.

To facilitate the ease of integration of the **NeXtage 16, SmartMatriX Ultra, Ascender 32 and Ascender 48** in high-end installations, **Analog Way** now provides drivers to control its Presentation Mixers through **Crestron's** advanced Control Systems.

Developed by **Technidream**, an official **Crestron Services Provider**, a comprehensive set of tools is available including: a driver library, program examples, VPro project samples for XPanel and iPad, as well as help files in French and English.

Using this package, integrators can access standard commands on the **LiveCore™** series through **Crestron 2-series and 3-series Control Systems**.

Moreover, the drivers provided are open so that they can be modified to add new commands to fill the needs of specific installations.

Franck Facon, Marketing & Communications Director at **Analog Way**, comments: *"The LiveCore™ series has a lot to offer to the integration market. By providing drivers for control through Crestron Control Systems, we intend to optimize the integration of our products within sophisticated automation environments."*

 Analog Way, Pioneer in Analog, Leader in Digital

Analog Way is a leading designer and manufacturer of presentation switchers and image converters with worldwide locations. The company designs a wide range of computer to video scan converters, scalers, seamless switchers and up/down converters. The products provide the most advanced solutions in the Broadcast, AV, Rental & Staging, Church, Corporate and Industrial markets.
